**Code Explanation Document**

**STUDENT ID: 2059502**

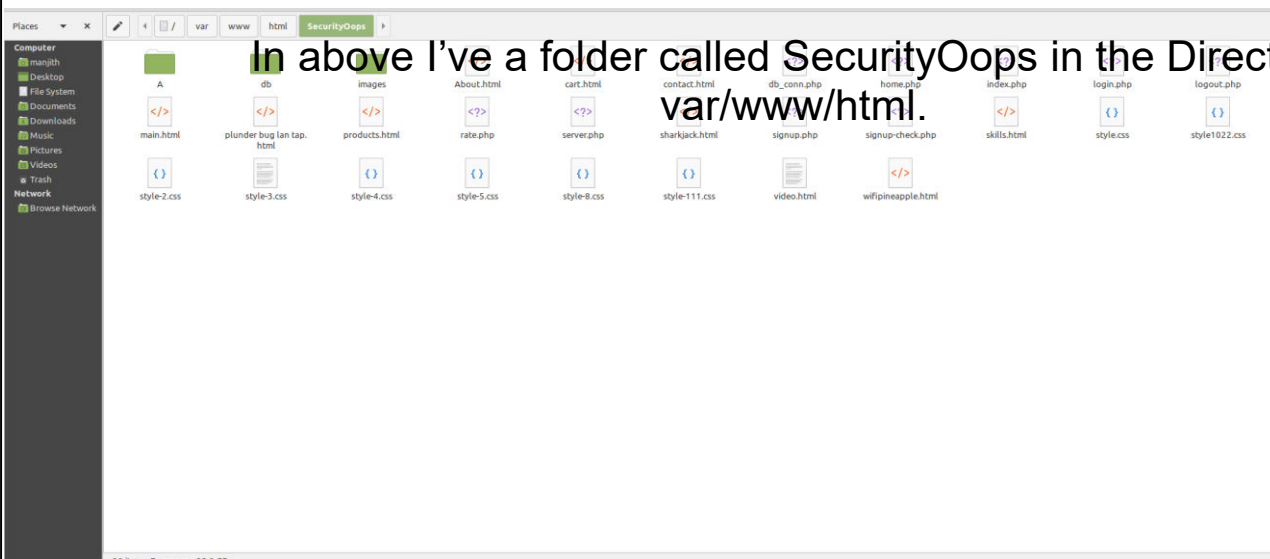

Trimester 1 – 2021

## **CODE EXPLANATION DOCUMENT**

For my Dynamic website I have used LAMP server (Linux, Apache2, Mysql and PHP). For Linux I have used Linux-mint In the Virtual-Box.

In above I've a folder called SecurityOops in the Directory `var/www/html`.

And In this image I have many files where all my content stored. I have a Folder in `var/www/html/SecurityOops` where I kept all my Files used to my Dynamic website

```
<!DOCTYPE html>
<html lang="en">
```

The HTML Tutorial <!DOCTYPE> tag is very first line of the HTML document. It tells the browser what version of HTML the document is written so that the browser knows what to do. And I second line you can notice a word Lang and that refers to language of the content page.

```
<link rel="stylesheet" href="style.css">
```

As you all can see the command above is used to connect the CSS page which is used for styles of the web pages.

```
<title>Security oops | Ecommerce store</title>
```

The above used to make a Title in the Top of the Web page. As i shown below.

```
<nav>
  <ul>
    <li><a href="index.html">Home</a></li>
    <li><a href="products.html">Products</a></li>
    <li><a href="About.html">About</a></li>
    <li><a href="https://www.youtube.com/channel/UCobaXsb6G8Ce95xBKkMXVOQ">Videos</a></li>
    <li><a href="contact.html">Contact</a></li>
    <li><a href="logout.php">Logout</a></li>
  </ul>
</nav>
```

As you can see the above Image codes used to navigate to another page from the home page. This commands will create a Buttons in the Home page which will navigate to Products, About, Videos, contact and Logout Page.

```

<div class="row">
  <div class="col-2">
    <h1>Start Learning Today</h1>
    <p> Learn The Art Of Hacking with the help of Security Oops </p>
    <a href="https://securityoopss.blogspot.com/" class="btn">Explore Now &#8594; </a>
  </div>

```

The command `<a href="https://securityoops.blogspot.com/" class="btn">Explore Now &#8594; </a>` Used to take me to my website where I wrote my blogs related to Ethical Hacking and Cyber Security. And the `<h1>` tags used to showcase some words. And the `<p>` tag used to represents a paragraph.

```

<!-- Featured Products -->
<div class="small-container">
  <h2 class="title"> Featured Proucts</h2>
  <div class="row">
    <div class="col-4">
      <p><a href="wifipineapple.html"></a></p>
      <h4>WiF1 Pineapple</h4>
      <p>$99.99</p>
    </div>
    <div class="col-4">
      <p><a href="sharkjack.html"></a></p>
      <h4>SHARK JACK</h4>
      <p>$96.99</p>
    </div>
    <div class="col-4">
      <p><a href="packetsquirrel.html"></a></p>
      <h4>Packet Squirrel</h4>
      <p>$79.99</p>
    </div>
    <div class="col-4">
      <p><a href="plunder_bug_lan_tap.html"></a></p>
      <h4>Plunder Bug LAN Tap</h4>
      <p>$120.00</p>
    </div>
    <div class="col-4">
      
      <h4>Screen Crab</h4>
      <p>$199.99</p>
    </div>
  </div>

```

I have some featured products in my website and the above code is used for the displaying the Featured products of my website. As I used a tag class which used to Identify the specific part. So that in CSS I can design the page.

## Featured Proucts

The above part is the CSS Code which i have used to Design the webpage.

```
.col-3{
  flex-basis: 30%;
  min-width: 250px;
  margin-bottom: 20px;
}
.col-3 img{
  width: 100%;
}

.small-container{
  max-width: 1080px;
  margin: auto;
  padding-left: 35px;
  padding-right: 25px;
}
```

Exclusively Available on Security Oops

## MITM ATTACK BUNDLE

A complete surveillance solution. Capture network traffic with the Packet Squirrel, video with the Screen Crab, and keystrokes with the Key Croc – all Cloud C2 enabled for real-time monitoring. Leave no port untapped with this Man-in-the-Middle attack bundle and get impressive loot on your next pentest!

[Buy Now →](#)

The above Image shows you the Exclusive offer made in my website. And i have used Gradient Colour for the Background and I have made a Button to Buy the Bundle.

```

<!-- OFFER AREA -->
<div class="offer">
  <div class="small-container">
    <div class="row">
      <div class="col-2">
        
      </div>
      <div class="col-2">
        <p>Exclusively Available on Security Oops</p>
        <h1>MITM ATTACK BUNDLE</h1>
        <small>A complete surveillance solution. Capture network traffic with the Packet Squirrel,
          video with the Screen Crab, and keystrokes with the Key Croc. All Cloud C2 enabled for real-time monitoring.
          Leave no port untapped with this Man-in-the-Middle attack bundle and get impressive loot on your next pentest!</small>
        <br>
        <a href="" class="btn">Buy Now &#8594;</a>
      </div>
    </div>
  </div>
</div>

```

```

.offer{
  background: radial-gradient(circle, #0000FF, #FF0000);
  margin-top: 80px;
  padding: 30px 0;
}
.col-2 .offer-img{
  padding: 50px;
}
small{
  color: rgb(0, 0, 0);
}

```

The code is the HTML code which i have used for Exclusive Offer Section. And the code used in the Down Image is for Design.

As In the code I've used Gradient Colour for the Back-Ground.

SecurityOops Home Products About Videos 102

The Above Image is the About Me Page where I have a Button “skills” which showcase my talents. And When You move your cursor on the above of Image I have a Hover effect which is cool. And also I have a Link to connect with my Instagram and Facebook page.

## My Skills

### My Skills Page

#### Ethical Hacking

Ethical Hacking in mean I was practicing some skills relates to ethical hacking with the help online tools and In kali linux can we can many tools so I practised a lot. I am not a beginner or not a advanced guy in this field.

#### UI/UX Designer

In the field of UI/UX Designing I was there for 2 years. I have doen only one project for My Teacher Who asked me to Do. When I was in High-school

#### Bash

For past two years I was using Kali linux. So I become a complesory to learn Bash to use Kali linux and I went through many tutorials in freecodecamp youtube channel.

#### OSINT

OSINT It is known as Open-source Intelligence. Which is available widely to use by all the people in the internet. and I got intreasted in it just by watching a movie "Searching" and Now I got plenty of Tools relates to OSINT.

#### Wordpress

Wordpress is used to host a website. I have hosted plenty of website. Including my High-school website. and I known the Security-related problems in Wordpress. so that your website cannot be hacked.

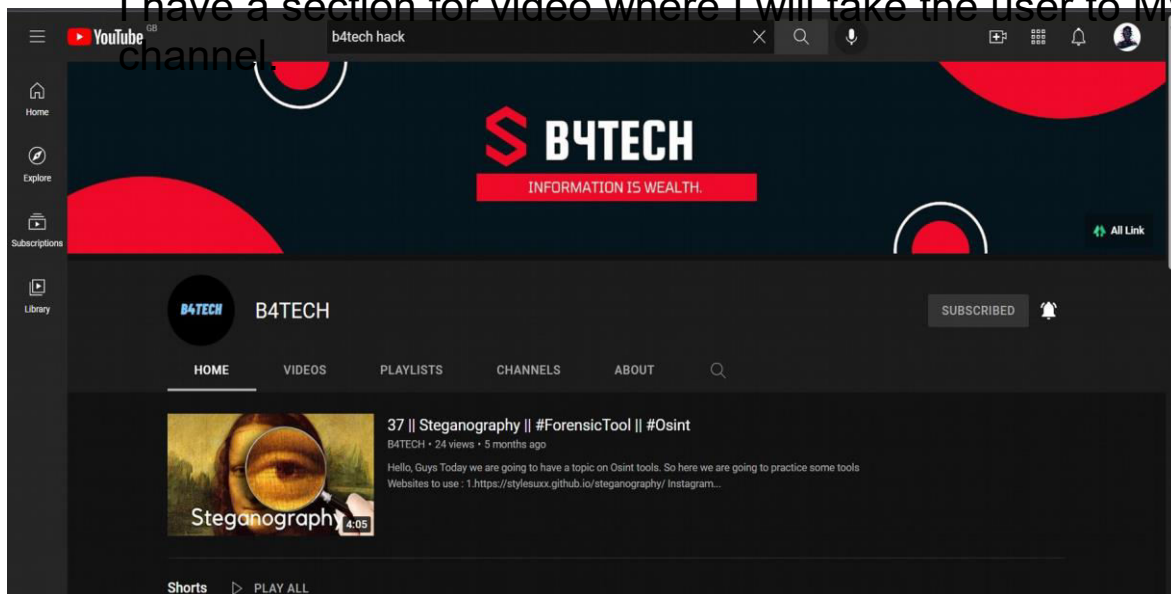

#### PYTHON

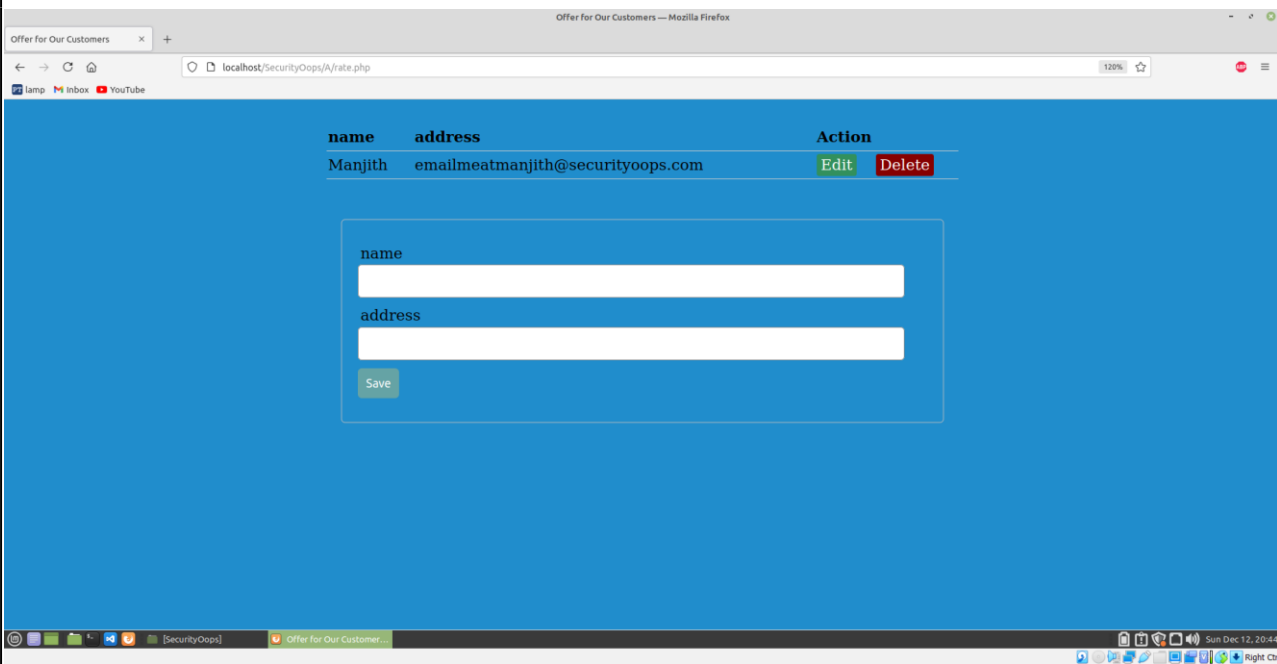

In the field of Python I am just a beginner. I known the basic programming of python but not in depth. So I am getting ready for that. which may help me in future.

This is the page where I Showcase My skills. I have used Hover Effect to show the webpage Beautiful

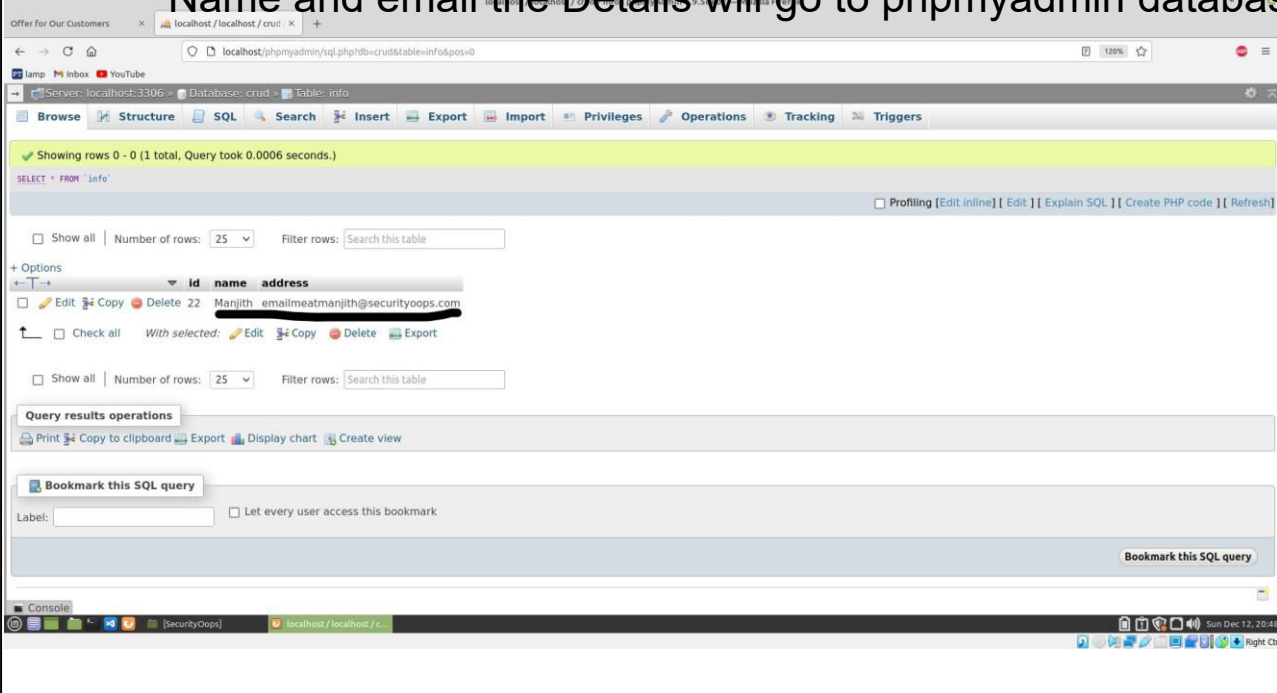

I have a section for video where I will take the user to My YouTube channel.

In this page the users can give their Name and email so that they can participate in the monthly giveaway. The username can create, Delete and Edit their Name and Email. Once they Entered the Name and email the Details will go to phpmyadmin database.

Home Products About Videos Contact Logout 

## Logout

There is also an option for Logout. Where user can come out of the website and when a user click on Logout it will directly go to Login page.

```

<?php
session_start();

session_unset();
session_destroy();

header("Location: index.php");|

```

Session\_start() : start new or resume existing session.

Session\_unset() : Function frees all session variables currently registered.

Session\_destroy() : Destroys all data registered to a session.

**Login page code**

```

<?php
session_start();
include "db_conn.php";

if (isset($_POST['uname']) && isset($_POST['password'])) {

    function validate($data){
        $data = trim($data);
        $data = stripslashes($data);
        $data = htmlspecialchars($data);
        return $data;
    }

    $uname = validate($_POST['uname']);
    $pass = validate($_POST['password']);

    if (empty($uname)) {
        header("Location: index.php?error=User Name is required");
        exit();
    }else if(empty($pass)){
        header("Location: index.php?error=Password is required");
        exit();
    }else{
        // hashing the password
        $pass = md5($pass);

        $sql = "SELECT * FROM users WHERE user_name='$uname' AND password='$pass'";

        $result = mysqli_query($conn, $sql);

        if (mysqli_num_rows($result) === 1) {
            $row = mysqli_fetch_assoc($result);
            if ($row['user_name'] === $uname && $row['password'] === $pass) {
                $_SESSION['user_name'] = $row['user_name'];
                $_SESSION['name'] = $row['name'];
                $_SESSION['id'] = $row['id'];
                header("Location: main.html");
                exit();
            }else{
                header("Location: index.php?error=Incorrect User name or password");
                exit();
            }
        }else{

    </form>

```

This page is used for the users to enter their Name and Email for a monthly giveaway. So that users can add, edit and delete their

details.

**This is How the Page looks like :**

name	address	Action
Manjith	emailmeatmanjith@securityoops.com	<a href="#">Edit</a> <a href="#">Delete</a>

name

address

[Save](#)

When ever user type their details it will store on the phpmyadmin database.

For this connectivity between the page and database I've again used php code for the connection.

In the above code i have connected the Database using a command :

```
<?php
session_start();
$db = mysqli_connect('localhost', 'manjith', '123456', 'crud');

// initialize variables
$name = "";
$address = "";
$id = 0;
$edit_state = false;

if (isset($_POST['save'])) {
    $name = $_POST['name'];
    $address = $_POST['address'];

    $query = "INSERT INTO info (name, address) VALUES ('$name', '$address')";
    mysqli_query($db, $query);
    $_SESSION['msg'] = "address saved";
    header('location: rate.php');
}

if (isset($_POST['update'])) {
    $name = mysqli_real_escape_string($_POST['name']);
    $address = mysqli_real_escape_string($_POST['address']);
```

```

<?php include('server.php');

if (isset($_GET['edit'])) {
    $id = $_GET['edit'];
    $edit_state = true;
    $rec = mysqli_query($db, "SELECT * FROM info WHERE id=$id");
    $record = mysqli_fetch_array($rec);
    $name = $record['name'];

This is page to showcase my all works related to Ethical Hacking and CyberSecurity.

skills

## About Me Page

### My Skills

#### Ethical Hacking

Ethical Hacking in mean I was practicing some skills relates to ethical hacking with the help online tools and in kali linux can we can many tools so I practised a lot. I am not a beginner or not a advanced guy in this field.

#### UI/UX Designer

In the field of UI/UX Designing I was there for 2 years. I have doen only one project for My Teacher Who asked me to Do. When I was in High-school

#### Bash

For past two years I was using Kali linux. So I become a compesory to learn Bash to use Kali linux and I went through many tutorials in freecodecamp youtube channel.

#### OSINT

OSINT It is known as Open-source intelligence. Which is available widely to use by all the people in the internet. and I got intrested in it just by watching a movie "Searching" and Now I got plenty of Tools relates to OSINT.

#### Wordpress

Wordpress is used to host a website. I have hosted plenty of website Including my High-school website. and I known the Security-related problems in Wordpress. so that your website cannot be hacked.

#### PYTHON

In the field of Python I am just a beginner. I known the basic programming of python but not in depth. So I am getting ready for that. which may help me in future.
